

Movêro Billing & Reporting

Movêro Technology provides billing and reporting functionality as part of our mobility management product suite. We work across carriers to give customers a unified look at wireless expenditures and usage patterns. Customers can view invoices by organization or individual wireless bills. Costs can be intelligently matched to the company's organizational structure through integration with common HR and supply chain management systems.

Gain Visibility & Control Over Your Mobile Expenditures

Movêro's browser-based Maestro™ platform makes managing wireless devices easy from the start. We provide a secure multi-carrier purchasing portal for mobile devices, software and associated services. Sites are custom generated to match the customer's carrier contract, discount structure, special terms and purchasing authorization processes. In addition, our integrated rules engine allows organizations to set preferred service plans or devices based on corporate policy. In addition to the Maestro platform, our billing and reporting system gives you easy online access to cross-carrier bill management and corporate allocation for mobile devices and wireless services. Billing information is mapped to department hierarchy for easy analysis and reporting. Visibility into your corporate mobile usage and expenditures helps reduce dispute cycles and yields optimal management and reporting without expensive optimization engines.

Movêro helps you simplify the increasing complexity of managing corporate mobile devices and service plans. With our multi-carrier billing and reporting functionality, you have the tools to:

- Review and audit
- Allocate costs effectively
- View by designated hierarchies
- Identify and control misuse and waste
- Manage mobile device assets
- Quickly review exception reports and information
